Wiring Few Sensors to one Zone with Enabled Double-Zone

This way of wiring is unique for Av-Gad panels, specially designed for the version 3 series.

This wiring diagram shows how to connect few sensors to the same zone. Enable the EOL mode and use the 1,500-ohm (1.5 kilo ohm) resistors, not supplied with panel. Separate Alarm and Tamper alarms indications will be indicated by the alarm panel. This wiring method is capable with all Av-Gad panels version 3, except AV-2048.
